

To our valued Customers,

Alberta and British Columbia Provincial Carbon Levy

Earlier in 2017, the provinces of Alberta and British Columbia implemented a Carbon Levy on all transportation fuels such as natural gas, diesel, gasoline and propane that emit gas emissions when combusted. This Levy is being phased in over a 2 year period.

Our current pricing does not offset these additional costs and we need to pass these additional expenses on as a carbon surcharge.

An Alberta Provincial Carbon Surcharge of 1% of freight costs will apply for any traffic that originates in or is destined for Alberta. It does not apply to goods passing through Alberta.

A British Columbia Provincial Carbon Surcharge of 1% of freight costs will apply for any traffic that originates in or is destined for British Columbia.

This surcharge will be shown as a separate line item on your invoice. If you have any questions regarding the application of this surcharge, please contact your local Account Manager.
